

The BPL proposal and present tests of same system are clearly to me the biggest threat to all the weak signal reception and receiving antenna work that is and has gone on in the 40 plus years I have been in amateur radio. I would strongly recommend that the commission look at all the work the ARRL and others have done to identify this interference fact and advise against it. We as amateurs already suffer interference enough from the poorly maintained power line connections which can sometimes be cured by the tightening of a bolt. Please don't knowingly enact more interference by the stroke of a pen.
